SUMMARY

Year II Bachelor of Software Engineering student at Makerere University with hands-on, shipped experience across mobile, web, and backend development. Co-founder of two active Ugandan tech ventures (TutorUG, CampusKart) and technical lead on an AI-powered agri-tech venture (KawaAI). Comfortable across the full stack: Kotlin/Jetpack Compose, React, Node.js, Supabase, Python, and PHP/Laravel, with additional experience integrating AI APIs, and algorithmic trading systems. Strong track record of taking projects from system design and architecture through to working, deployed products.

EXPERIENCE

Co-Founder & Developer, TutorUG

AI-powered, localized learning platform for Ugandan students. • Built with Kotlin/Jetpack Compose (mobile frontend), Supabase (backend/database), and the Anthropic Claude API for AI-driven tutoring features • Designed the complete system architecture and a district-level localization engine covering all 136 Ugandan districts • Authored a comprehensive investor-ready document covering product, market, and technical design

Co-Founder & Developer, CampusKart (formerly UniMart)

Campus marketplace platform targeting Makerere University. • Built a complete single-file React application implementing the full marketplace experience • Designed and implemented core business logic: escrow, commission structures, and subscription models • Integrated MTN Mobile Money (MoMo) for in-app payments with escrow-backed transaction safety

Technical Lead, KawaAI (formerly BuniAI)

AI-powered coffee farming assistant for Ugandan farmers. • Led technical planning for a TFLite/EfficientNet-B0 based coffee disease detection ML pipeline • Directed research into African sign language ML applications for accessibility features • Authored a six-phase build roadmap in collaboration with a two-person engineering team • Produced an investor-ready briefing document featuring eight data-driven charts and a full feature specification

Frontend & UI/UX Lead, Resume Builder Pro

Django-based resume-building web application. • Responsible for all Bootstrap 5 templates and the multi-step wizard JavaScript logic • Designed and implemented three distinct resume templates for end users

Freelance Web Developer, KM DYNASTY

Client website for TikTok Box Battle creator community “King Maker.” •
Delivered a client site built around a distinctive futuristic “Neo-Dynasty”
design direction

Independent Developer, Algorithmic Trading Systems

Multiple trading tools and indicators built around XAUUSD strategy execution.
• Built the BILSHENZ XAUUSD strategy into a full Pine Script v5 indicator
with Smart Money Concepts (SMC) entry logic and dual-timeframe execution,
including a complete rule-reference document • Developed a Fixed Range
Volume Profile (FRVP) Pine Script indicator with custom visual styling, daily
rollover detection, and buy/sell histogram bars • Designed a Polymarket trading
bot architecture in Python (asyncio, py-clob-client SDK) • Built and tested a
BOR strategy trading bot in both MQL5 and Python for HFM Zero accounts •
Hold active funded prop trading accounts with Equity Edge and GOAT Funded
Trader

EDUCATION

**Makerere University, School of Computing and Informatics Technology,
Bachelor of Software Engineering, Software Engineering, Kampala,
Uganda**

Relevant coursework: Requirements Engineering, Emerging Web Technologies
(PHP/Laravel/OOP), Mobile Programming (Jetpack Compose), Data
Communications, Operating Systems Produced LaTeX/PDF assignments,
technical presentations, and model answers across all core courses

SKILLS

-
- | | |
|------------------------------------|--|
| • Kotlin (Jetpack Compose) | • React |
| • Node.js | • Python |
| • PHP (Laravel) | • Pine Script v5 |
| • MQL5 | • Supabase |
| • REST API design | • Database/business-logic architecture |
| • Anthropic Claude API integration | • TFLite/EfficientNet-B0 ML pipelines |
| • AI-assisted product design | • Escrow logic |
